

Case Study Principle Cleaning

Paper Round

An introduction to Principle Cleaning

Principle Cleaning Services is committed to offering a high quality, sustainable and professional cleaning service to both large and medium organisations. Being medium size means the company is large enough to guarantee service excellence, but still small enough to care and give each customer the level of attention they deserve to ensure a successful partnership.

Client objectives

Principle Cleaning Services is committed to reducing the environmental impact of its operations, and is always looking at new ways to tackle sustainability in the workplace. Wherever possible, the company uses products and solutions with minimum environmental impact; this includes the use of eco cleaning products, cars and, of course, extends to the waste management services provided. Principle Cleaning Services need a waste management company who are able to consistently provide a high quality service which complies with the company's guarantee of service excellence matched with top sustainability credentials.

The challenge

Paper Round services 55 Principle Cleaning sites. These sites range from property and financial firms to IT and media companies. In each case, Paper Round is required to provide a bespoke service which is easy for the tenants to use.

How we helped Principle Cleaning

Paper Round provides a total waste management solution to the majority of Principle Cleaning sites which includes security shredding. On top of the regular collections, ad hoc visits are made when a building requires. This could be during an event or clear out, for example. By providing a range of complementary recycling and waste services, such as IT recycling, hazardous waste, fluorescent tube recycling and security shredding, Paper Round is able to help each building to handle all of its waste responsibly.

The results

In total, Principle Cleaning sites serviced by Paper Round have achieved a 66% recycling rate and a zero-to-landfill status. In 2017, Principle Cleaning saved 14,189 trees and 3,766 tonnes of carbon.
